

*Our
planet*

EuroComfort Group
Smart solutions for your comfort.

*Our
responsibility*

Protecting the environment starts with us.

Every day, we make hundreds of decisions that affect the environment – at home, on the way to work and in the workplace.

We don't have to do everything perfectly.
What matters is that each of us does something.

Why is this important?

Our planet has limited resources.

- we use huge amounts of water and energy,
- we produce more and more waste,
- emissions affect the climate and air quality,
- and we are losing natural ecosystems and biodiversity.

Caring for the environment is not just about caring for nature.

It is also about caring for our health, our future and the quality of life for future generations.

EVERYONE CAN MAKE A DIFFERENCE

Small actions make a difference:

-  sort your waste
-  switch off lights and appliances when not in use
-  save water
-  reduce single-use packaging
-  choose to walk, cycle or use public transport whenever you can
-  look after green spaces and nature

**One person can do very little.
A whole team – a great deal.**

AND WHAT ARE WE DOING?

Protecting the environment is part of our day-to-day operations. At our sites, we take specific measures to minimise the environmental impact of our operations.

The key areas include:

-  waste sorting
-  investment in renewable energy sources
-  reducing CO₂ emissions
-  recycling materials

This is part of our approach to responsible business practices.

Waste sorting

going →
ZERO
WASTE

Waste does not always mark the end of a product's life.

Proper waste sorting enables us to:

- recover valuable raw materials,
- reduce the amount of waste sent to landfill,
- increase recycling potential,
- reduce the consumption of new raw materials.

What about you?
Do you always know which bin a particular item of waste should go in?

Energy saving

☀️ The sun works alongside us.

At our plants, we use **photovoltaic panels**, which enable us to generate energy from a renewable source and power our staff facilities with it.

We are working to **build energy storage** systems to increase our own consumption and stabilise the electricity supply.

We reduce energy consumption by **installing LED lighting**.

Together, we are building a greener future

We reuse raw materials

What may be waste in one process can be a valuable raw material in another.

Pellet production allows us to utilise the material and give it a new purpose.

This is an example of an approach in which we seek ways to:

- reduce waste of raw materials,
- use materials efficiently,
- reuse what we already have.

**Less waste.
More reuse.**

Circular waste management

In our operations, we are guided by the principles of the circular waste management, thanks to which production waste becomes a valuable raw material, and production processes become more efficient and environmentally friendly.

This means:

- **Zero waste** through waste reduction
- Processing wood waste into eco-friendly **pellets**
- Using **foam and fibre waste as fillers** in production processes

WHAT WE DO AS A COMPANY IS ONE THING. YOU CAN DO EVEN MORE.

Our actions make a difference.

But without people's commitment, they won't be enough.

That's why we're counting on each and every one of you.

At work:

-  sort your waste according to the rules
-  switch off lights and equipment you're not using
-  don't waste water
-  minimise unnecessary use of materials
-  report any issues you notice and share your ideas for improvements

**If you see something we could do better –
let us know.**

LET'S REMEMBER!

**Protecting the environment isn't a one-off effort.
It's the sum of our everyday decisions.**

The company can create solutions.
Employees can support them.
Together, we can achieve more.

-  Let's look after what we have.
-  Let's use resources wisely.
-  Let's look for better solutions.
-  Let's think about the future.

**Because the planet is our
shared workplace and home.**
